SEO / GEO / AEO Audit Report

FULL AUDIT - all GCC countries

SEO	GEO	AEO
6/10	**5/10**	**5/10**
On Track	*On Track*	*On Track*

Audit date: 2026-10-23

Claude Skill and Plugin by Alex Labat

Executive Summary

brandmyprofile.com is technically tidy at the page-head level: all 114 sitemap URLs return 200, every page has a unique title, a self-referencing canonical, Open Graph tags and a single H1, and the site ships an llms.txt and a clean robots.txt. The most urgent issue is what a crawler that does not run JavaScript receives: every page, across all six GCC country sections, has an empty application root and the same generic fallback text, with no per-page body, no JSON-LD and no hreflang in the served HTML. Unknown URLs also return HTTP 200 (soft 404) instead of 404. The biggest opportunity is to make the UAE, Saudi, Qatar and Kuwait sections genuinely market-specific and to serve their real content, schema and hreflang in the pre-rendered HTML so search engines and AI engines can cite them.

Dimension	Score	Status	Key takeaway
SEO	**6/10**	**On Track**	Strong page heads, weak served content, soft 404s.
GEO	**5/10**	**On Track**	Good entity files (llms.txt, Organization schema in code); little citable content served; no verified reviews shown.
AEO	**5/10**	**On Track**	FAQ and answer content exists in the app but is not in served HTML; no HowTo or speakable markup seen.
Combined	16/30		

Method: raw HTML was fetched for all 114 URLs in the live sitemap, plus robots.txt, llms.txt, redirect and 404 tests, and the site's source code was read for schema and hreflang logic. A headless browser was not available, so rendered content (body copy, word counts, image alt text, headings inside the app, Core Web Vitals) could not be measured. Findings about rendered content are based on code and are marked as such. The live site may differ from the uncommitted local code.

Pages Audited

URL	Page type	Notes
/ (homepage, www)	Homepage	200; empty root; generic title; app redirects to a region client-side
/robots.txt	Crawl file	Allow all, Disallow /admin/, sitemap declared
/sitemap.xml	Sitemap	114 URLs, no lastmod
/llms.txt	AI file	Present; summarises services and regions
/kuwait, /uae, /saudi, /qatar	GCC homepages (4)	Unique titles; descriptions are template swaps of the country name
/bahrain, /oman	GCC homepages (2)	Only 3 URLs each (home, contact, CV writing)
/{region}/about, pricing, contact, success-stories, schedule	Core pages (about 20)	4 success-stories descriptions are 33-42 characters; long titles

URL	Page type	Notes
/{region}/services/* (cv-writing, ats-cv, gcc-cv, linkedin-makeover, masterclass, career-guidance)	Service pages (about 37)	7 identical cv-writing descriptions across regions
/{region}/cv-writing/{industry}	Industry pages (16)	Unique titles; differ only by country and industry
/blog and /blog/{hub}	Blog index and 5 hubs	/blog has no description, canonical or OG and uses the homepage title
/blog/{slug}	Articles (19)	Unique titles, canonical and OG; no article body in served HTML
/resources/gcc-cv-checklist, /privacy, /terms	Utility pages	Terms description is 48 characters
/kuwait/does-not-exist	404 test	Returns HTTP 200 with the homepage title (soft 404)
brandmyprofile.com and http://www	Redirect test	Both 308-redirect to https://www.brandmyprofile.com/ (good)

GCC Country Comparison

Country	URLs	Observation	Content
Kuwait	16	Fullest set; the served fallback text is Kuwait-first	Template
UAE	16	Same page set as Kuwait	Template
Saudi Arabia	16	Same page set as Kuwait	Template
Qatar	15	One fewer URL than the other three	Template
Bahrain	3	Home, contact, CV writing only; not in areaServed	Thin
Oman	3	Home, contact, CV writing only; not in areaServed	Thin

SEO Analysis - 6/10

Technical On-Page

Signal	Finding	Status
Title tags	All 114 pages have unique titles (no duplicates). 43 of 114 exceed 60 characters, for example "About BrandMyProfile - Human Career Support for GCC & India | BrandMyProfile Kuwait" (83 characters).	Needs Attention
Meta descriptions	113 of 114 present; /blog has none. Short: success-stories (33-42 characters in all 4 GCC regions), /terms (48), /blog/europass-cv-guide-india (30). 18 exceed 165 characters. The 7 /services/cv-writing pages share one identical description with no country name.	Needs Attention
H1	Exactly one H1 per page in served HTML, but it is the same generic noscript H1 ("BrandMyProfile - CV Writing, ATS Optimization, GCC CV, LinkedIn & Career Coaching") on every page, not matching each page title.	Needs Attention
Canonical	Self-referencing canonical on 113 of 114 pages with no mismatches. /blog has none.	Good
Robots / indexability	No noindex found. robots.txt allows all and blocks /admin/. Sitemap declared.	Good
Soft 404	/kuwait/does-not-exist returns HTTP 200 with the homepage title, so search engines can index junk URLs.	Missing
Open Graph / Twitter	og:title, og:description, og:image, og:url and twitter tags on 113 of 114 pages; one shared og image for all pages.	Good
Hreflang (served HTML)	0 of 114 pages contain hreflang in served HTML. The app code builds alternates client-side, but the pre-rendered HTML lacks them.	Missing
Internal links	The served noscript block links to services, regions and guides; every page repeats the same Kuwait-first link set.	Needs Attention
HTTPS / redirects	Non-www and http both 308-redirect to https://www.	Good
Images / alt text	No img elements in served HTML (rendered client-side), so alt text could not be audited. Check in a browser.	Needs Attention

Content Quality

Signal	Finding	Status
Word count	0 words of body copy on all 114 pages outside the noscript fallback. Rendered word counts could not be measured with HTML fetch.	Needs Attention
Regional differentiation	UAE, Saudi, Qatar and Kuwait titles and descriptions follow one template with the country name swapped (for example "GCC CV Format for {Country} Jobs"). No local hiring detail is visible in meta data.	Needs Attention
Freshness	Sitemap has no lastmod; article dates could not be read from served HTML.	Needs Attention

Structured Data

Signal	Finding	Status
JSON-LD in served HTML	None on any of the 114 pages. Code defines Organization, Service, WebSite and FAQPage (home), emitted client-side via Helmet.	Missing
Schema in code	Organization includes telephone, email, areaServed (5 countries) and sameAs (LinkedIn, Instagram, Google Business Profile). Bahrain and Oman are not in areaServed.	Good

GEO Analysis - 5/10

E-E-A-T Assessment

Signal	Finding	Status
About / entity clarity	Organization schema names the business, services and areas served. An About page exists for 5 regions (not Bahrain/Oman); its body was not visible in served HTML.	Needs Attention
Contact and trust	Phone/WhatsApp and email appear in the served fallback and in schema. Services are described as online with no office, which is honest and clear.	Good
Reviews	The Google reviews integration shows only a link when the feed is not live, so no rating or review text is displayed. Verified reviews are the strongest available trust signal.	Missing
Author information	Blog author byline and credentials could not be confirmed from served HTML.	Needs Attention

Content for AI Synthesis

Signal	Finding	Status
llms.txt	Present and describes services, regions and the online-only model.	Good
Non-JS crawler content	Crawlers that do not run JavaScript (for example GPTBot or PerplexityBot) receive identical generic text on every URL, with no per-page facts, FAQs or citations.	Missing
Factual density	Pages could not be read rendered. Guide titles promise GCC-specific CV, ATS and interview content that AI engines could cite if it were served.	Needs Attention
Region-specific facts	No local hiring detail visible in meta data. Add country-specific facts only where you can verify them.	Needs Attention

Technical GEO

Signal	Finding	Status
Crawlability	robots.txt allows all agents. Content is JavaScript-dependent for non-rendering crawlers.	Needs Attention
Entity graph	sameAs links to LinkedIn, Instagram and Google Business Profile are defined in code, not in served HTML.	Needs Attention
Coverage of GCC	Bahrain and Oman have 3 pages each and are absent from areaServed.	Needs Attention

AEO Analysis - 5/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct-answer block	Homepage code includes an answer block with a question heading and short answer, but it is not in served HTML.	Needs Attention
Definitions and lists	Could not be assessed in served HTML. Guide titles such as "How ATS reads your CV" suggest definition and list formats.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	FAQPage JSON-LD is built from region FAQs in code, client-side only. The homepage shows 7 FAQ questions.	Needs Attention
HowTo / speakable	No HowTo or SpeakableSpecification markup found in code or served HTML.	Missing
Question headings	The FAQ section uses natural questions ("How long does it take to get my CV?"). Blog headings could not be assessed.	Good

Voice Search Readiness

Signal	Finding	Status
Local signals	Services are online, so local address data is intentionally absent; phone and email are present. Country pages carry no city or local terms.	Needs Attention
Long-tail coverage	Industry CV pages (oil and gas, construction, finance, engineering, technology) cover long-tail queries for Kuwait, UAE, Saudi and Qatar.	Good

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Serve real page content in pre-rendered HTML (per-page H1, body copy, FAQ, JSON-LD, hreflang) instead of an empty root	SEO / GEO / AEO	High	Very high
Critical	Replace the identical noscript fallback with page-specific text and links on every URL	GEO / SEO	Medium	High
High	Return a real 404 status for unknown URLs (soft 404 currently returns 200)	SEO	Medium	High
High	Add title, description, canonical and OG tags to /blog	SEO	Low	Medium
High	Make UAE, Saudi, Qatar and Kuwait pages genuinely market-specific (verified local facts only), then confirm hreflang in served HTML	SEO / GEO	High	High
High	Show verified Google reviews and rating (finish the Places API setup)	GEO	Medium	High
Medium	Write unique, country-named descriptions for the 7 /services/cv-writing pages and the 4 success-stories pages	SEO	Low	Medium
Medium	Shorten the 43 titles over 60 characters; remove the duplicated brand suffix on About, Contact and Success Stories	SEO	Low	Medium
Medium	Add Bahrain and Oman to areaServed and expand their pages beyond 3 URLs if you want to rank there	GEO	Medium	Medium
Medium	Add HowTo and speakable markup to the best how-to guides	AEO	Medium	Medium
Quick Win	Add lastmod dates to sitemap.xml	SEO	Low	Low
Quick Win	Deploy current local changes and re-check (live sitemap has 114 URLs; the local public/sitemap.xml has 57)	SEO	Low	Medium
Quick Win	Run PageSpeed Insights on /kuwait and /uae for Core Web Vitals (not measurable here)	SEO	Low	Medium

What's Working Well

Unique, keyword-aligned titles	All 114 titles are unique, for example "CV Writing Services in Kuwait | BrandMyProfile" (46 characters).
Canonical and OG hygiene	113 of 114 pages have self-referencing canonicals and complete Open Graph tags; no mismatches.
llms.txt and clean robots.txt	/llms.txt describes services, regions and the online-only model; robots.txt allows crawling and declares the sitemap.
Clean redirects	Non-www and http redirect (308) to https://www with no chains.
Broad site map	114 URLs covering 6 GCC regions plus India, service pages, 16 industry pages and 19 articles.

Entity schema in code	Organization with telephone, email, areaServed and sameAs (LinkedIn, Instagram, Google Business Profile).

Glossary

Term	Meaning
SEO	Search Engine Optimization: helping pages rank in search results.
GEO	Generative Engine Optimization: making content easy for AI search tools to understand and cite.
AEO	Answer Engine Optimization: structuring content so it can be used as a direct answer or snippet.
Soft 404	A missing page that returns a normal 200 status instead of 404.
hreflang	Markup telling search engines which page version suits which country.
